

4.4.9.1 Where a recess is arranged in the freeboard deck, and this recess does not extend to the side of the ship, the freeboard calculated without regard to the recess shall be corrected for the consequent loss of buoyancy which is not included in the freeboard calculation. The correction would be equal to the value obtained by dividing the volume of the recess (lbdp) by the waterline area of the ship (A_w) at 85 per cent of the moulded depth (refer to Fig. 4.4.9.1).
